PROFESSIONAL SUMMARY

AI Engineer building persistent AI memory systems on Google Cloud. Expert in Vertex AI, Gemini, multi-agent architectures, and cloud-native development. Dedicated to engineering autonomous cognitive systems with zero-latency memory retrieval, enterprise scalability, and continuous lifetime context retention.

WORK EXPERIENCE

Founder & Chief Architect — AI Brain

2026 – Present

- Architected persistent memory architecture using vector embeddings for lifetime context graph retention across LLM agent sessions.
- Leading the design and development of 5 specialized autonomous AI agents (Code, Data, Memory, Workflow, and Orchestration).
- Engineered Google Cloud native infrastructure leveraging Vertex AI, Gemini 1.5 Flash/Pro models, Cloud Run, Firestore, and BigQuery.
- Designed high-performance developer API & SDK specifications for seamless enterprise AI memory integration.

EDUCATION

Bachelor of Technology (B.Tech) in Computer Science & Artificial Intelligence

Rajasthan,
India

- Specialization in Neural Systems, Distributed Cloud Architectures, Systems Engineering, and Machine Learning.

TECHNICAL SKILLS & EXPERTISE

AI & MACHINE LEARNING

Vertex AI

Gemini API

Multi-Agent Systems

Vector Embeddings

RAG Architecture

Neural Memory

CLOUD & INFRASTRUCTURE

Google Cloud (GCP)

Cloud Run

BigQuery

Cloud Storage

Firestore

Cloud Composer

DEVELOPMENT & SYSTEM DESIGN

TypeScript

JavaScript

Node.js

Python

REST APIs

System Design

LEADERSHIP & STARTUP STRATEGY

Product Architecture

GCP Startup Program

Developer SDKs

Technical Strategy
